How do I update the MT5 to the latest version?

Trading Platform · https://en.wmmarkets.com/knowledge-base/trading-platform/how-do-i-update-the-mt5-to-the-latest-version/

Updating your MetaTrader 5 (MT5) platform to the latest version is a simple process, ensuring you have access to the most recent features and enhancements. Here’s how you can update MT5:

Automatic Updates

MT5 is equipped with an automatic update system that checks for updates whenever you connect to a trade server.
If a new version is available, the platform will download it in the background without interrupting your trading activities.
Once the update is downloaded, a prompt will appear asking you to restart the platform. Simply click "Restart" to complete the update.

Manual Updates

If you prefer to handle updates manually, follow these steps:

Visit the official MetaTrader 5 website.
Download the latest version of the platform.
Run the installer and follow the on-screen instructions to complete the installation.
After the update is installed, restart MT5 to apply the changes.

Run as Administrator

To ensure a smooth update process, you can run MT5 as an administrator:
Right-click on the MT5 desktop icon.
Select "Run as administrator".
The platform will check for updates and install them if available.

This step can resolve issues related to permissions that might interfere with the automatic update process.

Benefits of Updating

Access to the latest features and tools.
Improved platform performance and stability.
Enhanced security for your trading environment.

By keeping MT5 updated, you ensure optimal trading conditions and seamless platform functionality.
