What is the leverage of the Trading Account?

Trading · https://en.wmmarkets.com/knowledge-base/trading/what-is-the-leverage-of-the-trading-account/

The default leverage offered by WM Markets is 1:2000. You also have the ability to request a different leverage level through the Client Portal.

WM Markets applies Dynamic Leverage, which is a risk-management tool designed to minimize risks from high-volume trading. With Dynamic Leverage, leverage is set per instrument by tiers rather than per account. Margin requirements are determined per symbol and automatically adjust when the net number of lots on open positions increases or decreases. This adjustment is applied individually to each trading instrument.

For full details on how WM Markets applies Dynamic Leverage, including the maximum leverage offered per asset class, please refer to the Dynamic Leverage page.
